

ENERGY STORAGE SYSTEMS

The increasing demand for energy across the globe is matched by a growing need for advanced energy storage systems. Leveraging our industry experience and strong technical backgrounds, we guide clients through the commercial and business processes required for the successful development, monetization, and production of these quickly evolving technologies. Clients value our passion for innovation and rely on our multidisciplinary capabilities to advise, protect, and advance their business goals.

With substantial legal and engineering experience, we are able to help clients apply battery technology to a multitude of industries. We have particular strength in the areas of:

- Automobile power systems
- Battery cell construction, cooling, and management systems
- Display devices
- Fuel cells
- Hybrid and electric vehicle systems
- Liquid-crystal displays (LCDs) and organic light-emitting diodes (OLEDs)
- Lithium battery technologies
- Photoelectric devices
- Semiconductor devices
- Telecommunications
