

SEMICONDUCTOR AND MATERIALS SCIENCE

While many industries are experiencing slower growth and expansion due to global economic fluctuations, the global semiconductor market is flourishing. As a result of emerging technologies – artificial intelligence, autonomous driving, and 5G, among others – as well as robust R&D programs, semiconductor manufacturers are poised to continue a steady upward trajectory.

Lewis Roca has a strong track record of providing the legal services clients need to grow their business. Our clients range from large multinational corporations to mid-sized businesses active in the manufacturing, processing, distributing, and trading of semiconductors and materials for the industrial, consumer electronics, health, and specialty markets.

We apply real-world technical experience and extensive knowledge of the issues and regulations confronting manufacturers to craft solutions that support our clients' bottom line. From developing effective strategies for the broadest possible patent coverage to planning for potential issues that may arise in business negotiations or litigation, we excel at maximizing opportunities for clients to achieve their goals.
